REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the claims are allowable over prior art of record, because none of the references in alone or in combination discloses an optical switch and the method of producing the optical switch comprising an input waveguide connected to an input optical fiber; a plurality of output waveguides connected to a plurality of output optical fibers; an actuator positioned between the input waveguide and output waveguides, having MEMS structure including a fixed part and moving part; and a plurality of moving waveguides assembled with the moving part of the actuator and moving in a same direction as a movement of the moving part in such a way that first ends of the moving waveguides correspond in position to the input waveguide, and second ends of the moving waveguides correspond in position to the output waveguides.

The underlined limitations are critically, since the optical switching device is significant improves: a response speed is faster, a smaller amount of an electric power is consumed to use the optical switch, and it is easier to connect the optical switch to optical fibers.

Bjorklund reference (US 2002/0047721 A1) discloses a MEMS device having a multiple DWDM filters, which each filter having a surface which reflects a particular wavelength of light and passes other wavelengths of light.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
